Reflection Magneto-Optical Trap for Single Atom Experiments The design of a new experiment at the Vienna University of Technology to trap and entangle single Rubidium atoms

By Oliver Gugenberger

AV Akademikerverlag. Paperback. Condition: New. 100 pages. Dimensions: 8.7in. x 5.9in. x 0.2in. The discovery of laser cooling and magneto-optical trapping was awarded with the 1997 Noble Prize in physics. Since then quantum atom optics has become one of the most active research areas in experimental physics. In this thesis Oliver Gugenberger gives a vivid description of the operation principle of magneto-optical trapping and how it is possible to perform single atom experiments based on this method. He designed a special-magneto optical trap at the Vienna University of Technology which will be used in upcoming experiments to trap and entangle single Rubidium atoms as a possible realization of a quantum computer. The manuscript is divided into three parts: The first part summarizes the required theory, the middle part describes the scientific procedure and the last part explains the components which are needed to run such an experiment. All in all, the book gives a comprehensive introduction to quantum atom optics with a touch of mechanical. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.

Reviews

A top quality ebook and the typeface used was interesting to learn. This can be for all who statte that there had not been a well worth reading through. I am just pleased to tell you that this is basically the very best ebook i actually have go through in my individual life and can be he finest book for at any time.

-- **Mr. Carol Berгнаum IV**

This publication will not be straightforward to begin on studying but quite fun to see. It really is basic but shocks in the fifty percent of the ebook. I realized this ebook from my dad and i advised this pdf to learn.
